WELCOME TO LEARNING CITIES 2040

Dear Colleagues,

We offer you all a warm welcome to the 13th PASCAL Conference at the University of Glasgow, the base for the European Centre of the Observatory. The theme of our conference this year is Learning Cities, a topic that has been a particular focus of our work over the years both through individual projects and within our networks bringing cities and regions together, PASCAL International Exchanges and the Learning Cities Networks. We are very pleased that so many of the cities within that network, which has been so well co-ordinated by Peter Kearns from Brisbane, are with us. We extend a particular welcome to these cities, and their representatives. It is apt that you are in Glasgow since this city has been a learning city since 1999, using that concept to inform its work, well before many others.

We have over 60 papers in parallel sessions and 17 city showcases for you to choose from in the Conference, organized within five themes and with over 30 countries represented. This is a truly global conference as befits PASCAL, the City of Glasgow and your host university, which has been outward looking since its establishment in 1451. We hope that you move well beyond the site of the conference to see the magnificence of the current university site. We also hope that you explore this very warm and welcoming city.

Within the Conference itself we will be exploring current learning city developments, and the future for learning cities. As we progress through the conference, bear in mind the overarching conference challenge question:

In a world of ever increasing silo initiatives, in what ways can Learning City initiatives be connected to complementary initiatives such as Smart Cities, Healthy Cities and Resilient Cities to facilitate holistic approaches to sustainable urban development and build cities and communities which are inclusive, healthy, smart and resilient?

There won't be an examination at the end of the conference – that would be innovative! However, we do hope that you will bear this question in mind throughout and offer your thoughts to inform our future work.

In advance let me thank our keynote speakers, presenters, panelists, student helpers and so many of my colleagues and the wider PASCAL community. I particularly want thank Dr Katarzyna Borkowska, who have offered so much assistance in organising the event and to our website administrator, Steve Rubin, who once more has produced an unsurpassed conference site. Now the real action begins.

Professor Michael Osborne Conference Chair

ABOUT THE HUNTERIAN

Since opening its doors to the public in 1807 as one of the first purpose built museums in the world and the oldest in Scotland, The Hunterian has been changing and evolving. The succession of relocations from London to Glasgow at the beginning of the nineteenth century, from the centre of the city to the new University of Glasgow campus on Gilmorehill in 1870, together with the multiple venue developments of the twentieth century, have all enabled greater use of collections for research, teaching and learning. Delegates will be given the opportunity for a private visit of the collection prior to its next move.

Funding from the Heritage Lottery Fund and the partners has been secured to create centralised storage for more than one million of The Hunterian's study objects and specimens serving a purpose-designed Collections Study Centre, which will foster innovative object-based research, teaching and learning for a wide educational audience at Kelvin Hall. This development, which is collaborative with Glasgow Museums and the Scottish Screen Archive of the National Library for Scotland will house more than 400,000 of its history, archaeology, ethnographic and design objects, including the Mackintosh tearooms and 100 years of Scottish history on film and video.
